- Mediant 800 SBA
- Mediant 800 SBA-N
- Mediant 1000B SBA-ES
- Mediant 1000B SBA-EO

Notice Details

AudioCodes has released an updated SBA Management Interface for Microsoft Lync Server.

This updated SBA Management Interface (Version 1.1.12.30) supports the following new features:

■ **Information Display Enhancements:**

- The Lync version and SBA version are now displayed on the Login page.
- Either the Lync Server 2013 or Lync Server 2010 logo is displayed in the SBA Management Interface screens according to the retrieved version.
- Dynamic application teaser links have been added to the SBA Home page.

■ **Reboot Enhancements:** The 'Restart' button has been replaced by the 'Reboot' button. This implies that instead of restarting the SBA service in each case, the SBA server machine is now rebooted.

■ **Automatic Reboot:** The SBA server is now automatically rebooted after a session timeout for setup procedures that require mandatory reboot, such as 'Device Preparation'.

■ **Security Enhancements:** This version includes SBA client and server side security enhancements.

Users will now be able to download the new Management Interface file, and apply it to the SBA. For additional information, refer to the *SBA Management Interface Release Notes*.

The SBA Management Interface file and the Release Notes can be downloaded from AudioCodes' website at <http://www.audiocodes.com/downloads>.
