

Product Notice #0366

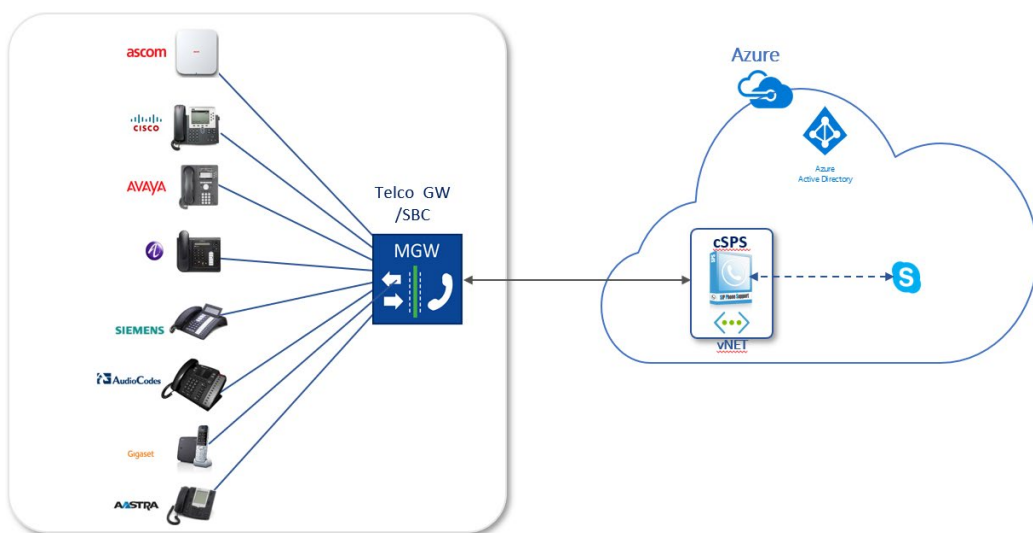

GA Release of AudioCodes cSPS - Cloud SIP Phone Support

AudioCodes is pleased to announce the release of AudioCodes cSPS - Cloud SIP Phone Support solution Software Version 0.2 for General Availability (GA).

For a full description of this release, click [here](#) to download the *cSPS Cloud SIP Phone Support Release Notes* from AudioCodes' website.

Features

The Cloud SPS (cSPS) Software allows connectivity of standard SIP devices into Microsoft Skype for Business Online including DECT and VoWiFi base stations, Analog devices (gateways), SIP Desk Phones and customized SIP devices.

This version supports the following features:

- **Multi User Device registration:** Defines the Terminate device registration from SPS
- **Outgoing call:** Users can make outgoing calls
- **Incoming call:** User can receive incoming calls
- **Hold Un-Hold, switch between calls:** Calls may be placed on Hold, Un-Hold and users can switch between calls.
- **Swagger GUI:** The current cSPS version supports a simple GUI (Swagger) that only works locally on the SPS server. A full Web GUI will be provided in a future version.
- **Transfer call:** Users can relocate the call to another phone
- **End User self-service GUI:** An SPS Online user must activate their account before it can be used. Activation is performed by the user running a Web API on the server while signed in to their Azure account.
- **User Presence:** The current version supports only Busy (In a call) Mode
- **Conference:** Support for conference calls
- **TCP only:** The current version supports only TCP

Affected Products

cSPS - Cloud SIP Phone Support Version 0.2 (initial GA version).
