

Product Notice #0369

Software Update for AudioCodes SBCs & Gateways -- Version 7.20A.254 --

AudioCodes is pleased to announce the release of Software Version 7.20A.254, a software update for AudioCodes' Session Border Controllers (SBCs) and Media Gateways.

This update includes many new and exciting features. Some of the key features are listed below. For a full description of this release, you can download the [Release Notes](#) from AudioCodes website.

This software update (.cmp file) is available for download from AudioCodes Services Portal at <https://services.audiocodes.com>.

Key Features

- The SIPRec capability can now record video streams of audio-video SBC sessions. This capability is relevant when interoperating with third-party Session Recording Servers (SRS) that support the recording of video streams.
- The Mediant 90xx and Mediant Software SBCs now support SIP signaling over SCTP in accordance with RFC 4168, with multi-homing capabilities. SCTP multi-homing provides redundancy capabilities, maintaining all SIP sessions in case of network failure between the SBC and the remote SIP proxy.
- The SBCs now support Message Session Relay Protocol (MSRP), which is a text-based protocol for exchanging a series of related instant messages (IM) across an IP network (TCP/TLS only) in the context of a session. MSRP is typically used for Next Generation 911 (NG911) services, allowing 911 callers to not only access 911 services through voice calls, but also through text messages with 911 Public Safety Answering Points (PSAPs).
- The SBC Configuration Wizard, which enables quick-and-easy initial SBC configuration, now also supports configuration for Amazon Chime Voice Connector. Amazon Chime Voice Connector is an AWS SIP Trunk service that is offered to customers for connecting their IP PBX and UC solutions.
- The SBC now provides an automatic and easy-to-configure method to replace the host part of the URI in outgoing SIP messages. This feature enhances the device's capability for hiding the incoming network topology (i.e., URI) from the outbound network. Up until now, Message Manipulation rules for each header were required to implement such topology hiding.
- VMware Tools, deployed as part of the SBC image for the VMware virtualization platform, has been updated from Version 9.4.10 to Version 10.3.5.
- The Mediant Software SBC's default License Key now also includes the license for Microsoft Teams ("TEAMS").

Affected Products

- Mediant Software SBC:
 - Virtual Edition (VE)
 - Cloud Edition (CE)
 - Server Edition (SE)
- Mediant 9000 / Rev. B / 9030 / 9080 SBC
- Mediant 4000 SBC
- Mediant 2600 SBC
- Mediant 1000 E-SBC & Media Gateway
- Mediant 800 E-SBC & Media Gateway
- Mediant 500 E-SBC & Media Gateway
- Mediant 500L E-SBC & Media Gateway
- MP-1288 Media Gateway
