## Release of Voca Version 8.0.1 for General Availability

We are pleased to announce the release of Voca Software Version 8.0.1 for General Availability (GA)!

This release includes many new exciting features as well as resolved constraints from previous releases. For a full description of the release, click [here](#) to download the *Voca Release Notes* from the AudioCodes website.

This software includes the new automatic installer that provides users with a simplified and seamless installation process for this version and all future ones. The new installer is available for download from the AudioCodes [website](#) (for registered customers only).

### Major Features

- Voca now supports English UK and Portuguese (Brazil) via Microsoft Azure Cognitive Services. This indispensable new integration enables Voca to instantly support new languages on demand, with additional languages support to follow.
- Customers can now easily add an AudioCodes WebRTC click-to-call button connected to Voca onto any website, enabling end-users to access the company IVR with a single click, directly from a company website.
- Voca offers improved resource consumption of the AudioCodes Voice Recognition engine for easier scalability of large deployments. For On-premise deployments over virtual machines (VMs) or hardware, Voca now supports:
  - ✓ 20 concurrent Voca channels for English (US)
  - ✓ 16 concurrent Voca channels for German (Germany, Austria, Switzerland)
  - ✓ 30 concurrent Voca channels for Spanish (multi-dialect)
  - ✓ 30 concurrent Voca channels for Microsoft Azure supported languages

### Affected Products

Voca
