

One Voice Operations Center (OVOC)

Streamlined voice network lifecycle management and quality assurance

AudioCodes One Voice Operations Center (OVOC) is a voice network management solution that combines management of voice network devices and quality of experience monitoring into a single, intuitive application. OVOC enables administrators to adopt a holistic approach to network lifecycle management by simplifying everyday tasks and assisting in troubleshooting all the way from detection to correction. OVOC can be deployed in service provider and enterprise networks and supports end-to-end quality of experience monitoring in Microsoft Teams environments.

OVOC provides IT staff with single pane of glass through which they can manage and monitor VoIP devices and elements from a single centralized location, saving time and costs. Tasks normally considered to be complex and time-consuming, such as performing root cause analysis, provisioning new devices and initiating bulk software updates, can now be carried out simply and rapidly. OVOC's open APIs enable integration with 3rd party applications to provide additional functionality such as enhanced voice analytics and data-layer monitoring.

OVOC
One Voice Operations Center

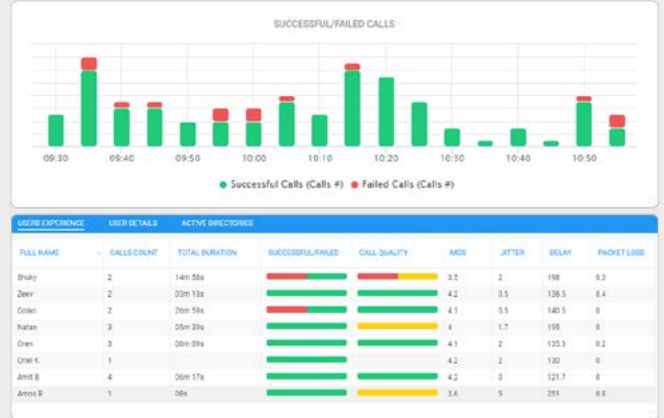

Rapid Commissioning and Provisioning

- Device discovery and auto-registration
- Automatic initial configuration of devices
- Easy-to-use device license allocation and management
- Network topology planning and design

Streamline Day-to-day Operations

- Increase efficiency using centralized real-time monitoring dashboard and maps
- Mass configuration and software updates for all AudioCodes products
- Improve availability with accurate and correlated alarm indications
- Gain intelligent insights into network trends and performance to assist in planning and design

Quality Assurance and Analytics

- Identify and mitigate voice quality issues before they become service affecting using real-time network view and quality alerts
- End-to-end QoE monitoring for Microsoft Teams calls and meetings
- Troubleshoot quality issues and drill down for simple and effective root cause analysis
- Pattern detection and network planning via advanced reporting tools

Robust and Scalable Architecture

- Highly scalable, designed to meet needs of small to large enterprises and service providers
- Multi-tenancy support for hosted and managed environments
- Runs as virtualized application on AWS, Azure, Hyper-V and VMware
- Full resiliency with distributed architecture
